CK Power Family of Companies Celebrates Breakthrough Debut at CONEXPO-CON/AGG with Unified Booth and Record Engagement

St. Louis, MO — The CK Power Family of Companies returned from CONEXPO-CON/AGG with strong momentum following a milestone event that marked the first time its divisions, CK Power, Terramac, Hayes Manufacturing, Consolidated Machine and Welding, and Rocky Mountain Powertrain, came together under a single, unified booth. The showcase highlighted the organization’s fully integrated capabilities across manufacturing, distribution, and aftermarket support, drawing unprecedented attention from across the construction and equipment industries.

“This was a defining moment,” said JJ Costello, CK Power Family of Companies Co-CEO. “Bringing all of our divisions together allowed us to tell a bigger story, one centered on delivering complete, end-to-end solutions for our customers.”

A Booth That Delivered, and Then Some

From show open to final tear down, booth traffic remained consistently high, exceeding expectations across all divisions. A customer appreciation happy hour drew overwhelming attendance, reinforcing strong relationships and creating new connections across industries.

Success at CONEXPO-CON/AGG was measured at multiple levels: each brand generated strong leads, customers discovered new capabilities across the company’s divisions, and teams connected and strengthened collaboration internally.

Terramac Breaks New Ground

Terramac debuted its wheeled dumper line at CONEXPO-CON/AGG for the first time, generating immediate enthusiasm. The D14XL Wheeled Dumper with a 3,000-gallon water tank drew attention from a wide range of applications, resulting in a robust demo pipeline heading into Q2.

Additionally, the RT14R unit showcased at the event was sold directly off the floor and delivered to Terramac’s first Caterpillar dealer, Western States Cat, a milestone opening new opportunities within the CAT dealer network.

CK Power Showcases Innovation and Energy Evolution

CK Power introduced its new 2G DR aura 412, a 530kWe single-engine natural gas prime power generator set designed to deliver improved fuel efficiency, lower emissions, reliable prime power for remote job sites, and cost-effective operation in regions with access to natural gas.

The company also unveiled the CKG75TJDM5, a 60-70kW mobile generator prototype powered by the latest John Deere JD4 engine, underscoring CK Power’s engineering capabilities and reinforcing its long-standing OEM partnerships.

“CK Power’s prototype is an impressive demonstration of both engineering and manufacturing excellence,” said Juan Ledesma, Account Manager at John Deere Power Systems. “As the first OEM to deploy the John Deere JD4 engine in a generator application, they have distinguished themselves not only as a leading distributor, but also as a highly capable industrial manufacturer.”

Hayes Manufacturing Showcases Industry-Leading Power Transmission Expertise

Hayes Manufacturing impressed attendees with its world-renowned power transmission components, featured in a significant percentage of equipment on the show floor. Beyond their well-known couplings, Hayes demonstrated broader capabilities, forming new relationships with engine distributors and OEMs seeking advanced power transmission solutions.

Made in the USA and Built for More

Visitors were drawn to CK Power Family of Companies’ U.S.-based manufacturing hub in St. Louis, where both Terramac equipment and CK Power generator sets are produced in a centralized location, ensuring quality control, faster turnaround, and responsive support. The company also highlighted its contract manufacturing capabilities, serving as a trusted partner for complex builds with unmatched service and aftermarket support.

Looking Ahead

The energy from CONEXPO-CON/AGG is fueling excitement across the CK Power Family of Companies. With new opportunities on the horizon, expanding partnerships, and continued innovation, the organization is well-positioned for a strong year ahead.

“We’re incredibly proud of what we accomplished at CONEXPO,” Costello added. “But even more exciting is what comes next, the relationships we’ve built, the doors we’ve opened, and the opportunities we’re ready to pursue.”

About CK Power Family of Companies

CK Power Family of Companies is a thriving collective that specializes in delivering solution-focused manufacturing, distribution, and aftermarket services to the industrial sector. With a global presence across five divisions, we unite through family values and a unique corporate culture. Established in 1929, we bring forth extensive experience in product innovation, market flexibility, and customer service. By leveraging a network of shared resources and expertise, we excel in navigating business complexities, fostering ongoing innovation, and consistently delivering exceptional product support. Our commitment to upholding our values remains steady, supported by generations of dedicated employees and loyal customers. Our mission is to continuously expand its product and service offerings in the marketplace, ensuring sustained growth, relevance, and enhanced customer experience.
